Download our ICAO airport codes database and gain access to unique four-letter ICAO codes each associated with a particular airport in the world. The first letter of ICAO code represents the region, the second letter is for countries and last two are for the name of the city in which the airport is located. ICAO airport name codes are more comprehensive than IATA airport codes as ICAO codes also give information about country and region in which the airport is situated. The list of codes is used by Air Traffic Control communications and it helps them saving time by identifying an airport very quickly. Our database is also used by many flight tracking software applications. Database of all icao names and codes of all of the international and local airports The ICAO airport codes database by Aviation Edge is current and accurate. To ensure the authenticity of the database Aviation edge acquires airport names and codes from different sources and then updates it frequently. The best thing about our database is that it is not only checked by software alone but our team of experts also checks database manually for any error. At the moment, our database contains abbreviations and short names of all international airports, in total, we have data of over 50,000 airports of the world and we are in process of adding more entries in our database. Download ICAO names and codes data in excel, csv or sql formats The ICAO airport codes database is very developer friendly and its available for download in many different formats. You can download the database in Excel, SQL or CSV format. Aviation-edge ensures full support during subscription process and after database download. After subscription, your email will be added to our customer list and every update will reach you by e-mail for 12 months. or Have you ever wondered what the three, or four-letter acronym on your plane ticket means, or how are they assigned? Airport codes are used to distinguish airports around the world, to ensure there is no confusion between countries and cities. Airport codes appear on passengers' documents related to their reservations, flight tickets and luggage tags, and they are also used by air traffic controllers and pilots. ICAO and the International Air Transport Association (IATA) are the two official entities that issue airport codes, but their codes are different. Every official airport in the world is given a three-letter code from IATA and a four-letter code from ICAO – from one of the world's largest airports, Dammam/King Fahd International Airport (ICAO: OEDF, IATA: DMM) in Saudi Arabia, to one of the smallest, Saba/Juancho E. Yrausquin Airport (ICAO: TNCS, IATA: SAB), on the Dutch Caribbean Island of Saba. The ICAO airport codes, also known as location indicators, are the four-letter sequences used by pilots and air traffic controllers in their charts, on-board systems and in communications. They are also used to identify other aviation facilities, including weather stations, international flight service stations or area control centres. ICAO also assigns codes to identify flight information regions – the areas of airspace allocated to specific States to manage air traffic. ICAO Location Indicators for some international airports: Hartsfield-Jackson Atlanta International Airport: KATL Los Angeles International Airport: KLAX Toronto/Lester B. Pearson International Airport: CYYZ Beijing Capital International Airport: ZBAA Shanghai/Pudong International Airport: ZSPD Moscow/Domodedovo Airport: UUDD London Heathrow Airport: EGLL Paris-Charles de Gaulle Airport: LFPG Amsterdam/Schiphol Airport: EHAM IATA codes, also referred to as IATA location identifiers, are three-letter codes primarily used to identify airports but which can also refer to bus stations, ferry terminals, rail stations and helipads that are involved in intermodal travel. IATA airport codes are often based on the first three letters of the airport's city. For example, ATL is the location identifier for the Hartsfield-Jackson Atlanta International Airport, and MEX is used for Mexico City. The airport codes can also refer to the city's initials-HKG for Hong Kong or SLC for Salt Lake City. For many ICAO codes, the first letter refers to a larger region. The second shows the country within that larger region, and the remaining two letters are a two-letter abbreviation. In Europe, codes begin with either an E (northern Europe), B (Iceland and Kosovo), L (southern Europe), Barcelona's Josep Tarradellas Barcelona-El Prat Airport's ICAO code is LEBL – "L" denoting southern Europe, "E" for Spain (España) and finally "BL" for Barcelona. Larger countries may have an initial letter dedicated to them, for example, Canadian airport codes start with "C". Montreal/Pierre Elliott Trudeau International Airport would be CYUL—the "C" is for Canada, and "YUL" is the specific airport code. Airport codes starting with "K" designate American airports – here there is a relationship between the ICAO and IATA codes since US airport ICAO codes are defined using "K" and then including the 3-letter IATA code, so New York's John F. Kennedy International airport is "KJFK" since the IATA 3-letter code is just "JFK". ICAO's Location Indicators (Doc 7910) contains listings of ICAO's four-letter location indicators as well as the corresponding three-character IATA location identifier codes. A list of addresses of centres in charge of flight information regions (FIRs) and upper flight information regions (UIRs) is also included in the document. Four-letter location indicators are planned and assigned to identify the geographical areas where a station is forming part of the Aeronautical Fixed Service (AFS). AFS is a telecommunication service between specified fixed points provided primarily for the safety of air navigation and for the regular, efficient operation of air services. The Aeronautical Fixed Telecommunication Network (AFTN) forms part of AFS and uses the ICAO 4 letter location indicator as the initial part of the address. Following this, a three-letter code is added to refer to a specific organization or function, followed by a final letter to indicate the department, division or process within the organization or function that is referenced (where not required this last character can be indicated by an 'X'). Examples of these organizations of services include: ZTZ – Control tower YDY – Airport manager YMY – Met Office Putting these together with the location indicators allows for messages to be sent via AFTN to specific recipients (examples from Annex 10, Volume 2): LGATZTZX aerodrome control tower (ZTZ) at LGAT LGATYMYF section (F) of the Meteorological Office (YMY) at LGAT LGATKLMN department (N) of the aircraft operating agency KLM (KLM) at LGAT All the Airports in India are listed below. For more information about any of these airports click on the airport name. There are 132 Airports in India and this list covers all these 132 India Airports. Find Airport Information with airport to airport distance, airport to city distance, Current Time and Date at airport India etc... Given above is the list of Airports in India. This includes every single India Airports - International Airports, Domestic Airports, Military and Private Airports etc... If you are planning a visit India or travel to any city in India, knowledge about the airports and other travel facility will be really useful. Get India Codes, location of Airports, India Airport Map etc...
